Service Bulletin: CSM060214
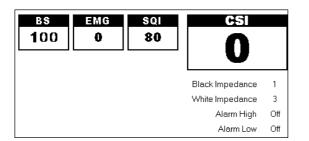

Odense 14 Feb. 2006

Subject:
CSM Link Software version 3.01

Issue:
In CSM Link Software version 3.01 the legends for black and white impedance has been interchanged by mistake.

This picture is as it is shown in CSM Link software version 3.01

The correct reading should be:
White Impedance   1
Black Impedance   3

Cause:
The texts for black and white impedance has been interchanged by mistake

Solution/workaround:
The reading on the CSM monitor itself is correct, so primarily use these readings for impedance check.

Update:
This problem will be fixed in a new release of CSM Link Software. (New release not planned yet)

Kind Regards
Danmeter A/S
